

## Case Study

An out – of – state visitor from California wishes to see her grandmother during the holidays. While screening at the front desk, the visitor reports that she had COVID-19 this past summer and a negative COVID-19 test 14 days after her symptoms/illness resolved. She is unable to produce a copy of the test result.

The screener at the facility finds that the visitor is afebrile but notes that she has a frequent, dry cough.
